

RECONSTRUCTION AND ECOLOGICAL MODIFICATION OF COAL BOILERS

We carry out general reconstructions, ecological modifications and adaptations of coal boilers (pressure systems, combustion unit, linings and other parts of boilers).

For coal boilers (grate, pulverized-fuel, fluidized bed boilers and others) we deliver spare parts for pressure systems, combustion units, clinker removal and other parts of boilers and boiler rooms.

We carry out adaptations of boiler combustion processes, “ecological modifications”, so that boilers comply with emission limits for solid fuels in accordance with the current legislation.

Schema is just for information.
